Ngo Pham Minh Duc

AI Intern

mcminhduc2004@gmail.com 0975780383 Github LindedIn

Education

Hanoi University of Science and Technology 10/2022 - 08/2026
Bachelor's Degree in Electronics and Telecommunications Engineering CPA: 3.0/4.0
Smart Embedded Systems & IoT

Languages

English
IELTS 6.5 TOEIC 800

Experience

HANET TECHNOLOGY JSC G-Group Technology Corporation
AI Intern 05/2026 - Present

- Developed AI solutions for behavior and event analysis using camera-based systems for real-world surveillance applications.
- Optimized and deployed AI models on edge devices to achieve efficient real-time inference with limited computational resources.

EDABK Hanoi University of Science and Technology
AI Researcher 03/2025 - Present

Member of the AI research group and the AI/ML training team.

- Conducted applied research in Machine Learning and Computer Vision projects.
- Collaborated on algorithm development, model optimization, and AI system prototyping.
- Built and optimized AI models for real-world and AIoT applications with a focus on performance and efficiency.

Technical Projects

Optimized AI models for banking operations 09/2025 - Present

Optimized object detection and face recognition models for edge AI deployment, focusing on model compression to improve inference speed, reduce computational cost, and maintain accuracy in real-time multi-camera systems.

Responsibility: AI Engineer

Technical: Pruning, Knowledge Distillation, Edge AI Optimization

Tools/Hardware: PyTorch, TensorRT, ONNX, OpenCV, NVIDIA Jetson

Academic Research

Civil Intelligent Sensing System 05/2026
43rd HUST Student Research Conference
Built a real-time multi-camera traffic monitoring system on **Jetson AGX Orin** using optimized **VLM**, **person search**, and parallel AI pipelines, achieving **15–20 FPS** across **60 streams** on **edge devices**.

Voice2Text 05/2026
43rd HUST Student Research Conference
Developed a Vietnamese **Voice-to-Text** system using state-of-the-art ASR models, supporting **speaker recognition** and **diarization**, optimized for real-time inference on **edge devices** from microphone input.

Multi-Camera Face Detection on CPU-Only Systems 05/2025
42nd HUST Student Research Conference
Optimized a **multi-camera AI system** for face detection by compressing the **YOLOv3** model and improving the video decoding pipeline, enabling real-time processing of **12 camera** streams at **10 FPS** using **CPU** only.

Awards

Best AI Award Taiwan 2026 04/2026
Finalist – AI Applications Track
Selected as **Top 10** in the **International AI Applications Company Track** with the project **"Civil Intelligent Sensing System".**

Vietnam Electronic Design Contest 2025 11/2025
Top 5 in the Northern Region
Smart Urban Monitoring Using Edge Computing Technology Achieved

---

Certifications

43rd HUST Student Research Conference Certificate 05/2026
Hanoi University of Science and Technology (HUST)

Best AI Award Taiwan 2026 05/2026
Department of Industrial Technology, Ministry of Economic Affairs (MOEA)

BGSW - VN Embedded Academy Certificate 10/2025
Bosch Global Software Technologies Vietnam (BGSW-VN)

42nd Student Research Conference Certificate 05/2025
Hanoi University of Science and Technology (HUST)

Skills

Programming Languages
C/C++, Python, CUDA

AI/ML
Deep Learning, Model Optimization, Face Recognition, Speech Recognition

Frameworks/Tools
PyTorch, OpenCV, ONNX, TensorRT, NumPy, CUDA Toolkit
